

CEU WHAT'S YOUR EQUATION

FOR SUCCESSFUL HEALTHCARE SOLUTIONS

IDCEC COURSE ID: 108812

SUBJECT CODE: 4.1 (Design Specialties + Corporate Office)

DESIGNATION: HSW

CLASSIFICATION: Basic

AIA COURSE ID: AIACES0319

DESIGNATION: LU | HSW

EDAC COURSE ID: NOF19-ESHS

COURSE DESCRIPTION:

The course provides insight into four equations to consider when designing a successful healthcare solution:

DIGNITY + RESPECT = HUMANITY

Illustrating the components that support humanistic, inclusive, and progressive designs for healthcare settings. Whether spaces are for children, young adults, middle age folks, or older adults, every design has an opportunity to be supportive to a patient, which results in positive outcomes.

CONVENIENCE + INTERACTION = RELATIONSHIP

Diving into the changes within the U.S. healthcare system and technology that are influencing a shift in the design of hospitals, outpatient, and long-term care settings. We will reference the Facility Guidelines Institute's publications on these settings.

UNIVERSAL DESIGN + SERVICE ACCESS = ALL-INCLUSIVE COMMUNITY

Addressing design for all people. This is defined as a "process" that addresses physical space as well as access to socialization, services, and amenities.

WISDOM + YOUTH = COLLABORATION

Bringing about the best solution for healthcare design projects by addressing the need for collaboration of all ages. We will challenge the audience to define their own additional equations and be a leader to support person-centered care.

When designing, there are many equations that can be used, and focusing on one is not enough. Successfully identifying the appropriate equations will leverage thought leadership, foster collaboration, and lead design to provide a patient-centric environment that is supportive of all physical, social, and emotional preferences.
