Figure A

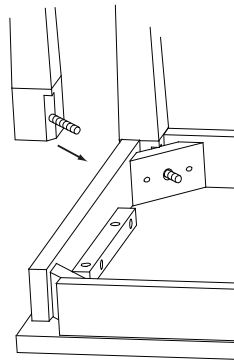

**2** If previously installed, remove the nut and washer from the lag bolt on each leg (Figure B).

Figure B

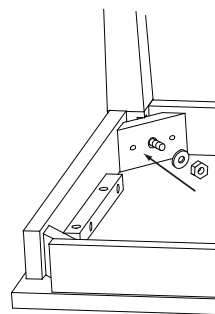

**3** Insert the lag bolt on each leg through the hole in one corner block on the worksurface (Figure C).

Figure C

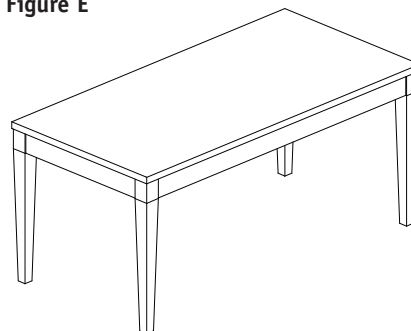

**4** Secure the leg to the table by using one washer and one nut per leg. Make sure the leg is perpendicular and flush to the apron rails. Tighten the nut firmly by using an adjustable wrench or a 13mm socket wrench, but do not over-tighten (Figure D). Follow the same procedure to install the remaining legs.

Figure D

**5** After all legs are installed, carefully turn table to the upright position. If the table displays a swaying motion, then one or more of the legs are not properly seated in their locations. Turn the table back over onto the soft surface and re-check all legs to make sure they are perpendicular and flush to the apron rails and that all fasteners are properly installed and tightened (Figure E).
