

## ASSEMBLY INSTRUCTIONS

**1** Cornice tops can be added to the top of a storage unit. Longer tops can be used to span multiple storage units. All Cornice tops are equipped with spacer rails and foam tape to create a 1/8" reveal line between the storage unit and top (Figure A).

**2** Cornice tops (30" to 72" wide) are shipped with two attached spacers. Longer Cornice tops (78" to 108" wide) are shipped with two loose extra spacers. These spacers can be positioned underneath the Cornice top to help support the weight of the Cornice top. Peel off the double stick tape and position as needed.

**Note:** Spacer needs to be attached to Cornice top, not end panels (Figure A).

**3** To attach top to cabinets, measure inside the cabinet 3" from sides. Bore through the inside of the top panel using 3/16" drill bit. Attach Cornice top using 1 1/2" panhead screws (Figure A).

**4** Butting two (2) Cornice tops will cause a gap between the storage units below approximately 5/32" (Figure B). Foam tape is provided with each Cornice top to help conceal this gap.

**Note:** Foam tape is applied to side of one storage unit 1/8" back from edge of the end panel.
